

AI Secretary - Developer Handover Package

Overview

This package contains the complete AI Secretary platform - a multi-agent personal assistant system with advanced voice recognition, task management, and administrative capabilities.

Package Contents

Main Application

- **ai-secretary/**: React/TypeScript frontend application with Vite
- Modern UI with dark/light themes
- Voice recognition and text-to-speech capabilities
- Task management and history tracking
- Administrative dashboard
- Gamification features

Backend Infrastructure

- **supabase/**: Complete backend configuration
- **functions/**: 30+ Edge Functions for various services
- **migrations/**: Database migration files
- **tables/**: SQL table definitions
- **types.ts**: TypeScript type definitions

Documentation

- **docs/**: Comprehensive technical documentation
- Architecture diagrams
- API integration guides
- User training materials
- Deployment verification reports

Testing & QA

- Multiple test reports and verification scripts
- Browser automation tests
- Performance monitoring tools

Quick Setup Instructions

1. Frontend Setup

```
cd ai-secretary/  
pnpm install  
pnpm run dev
```

2. Supabase Setup

1. Create a new Supabase project
2. Run migrations: `supabase db push`
3. Deploy edge functions: `supabase functions deploy`
4. Update environment variables with your Supabase keys

3. Environment Variables Required

```
VITE_SUPABASE_URL=your_supabase_url  
VITE_SUPABASE_ANON_KEY=your_supabase_anon_key
```

Key Features Implemented

- ✓ **Authentication System:** Multi-tier user authentication with admin controls
- ✓ **Voice Recognition:** Advanced speech-to-text and text-to-speech
- ✓ **Task Management:** AI-powered task processing and history tracking
- ✓ **Administrative Dashboard:** User management and analytics
- ✓ **Multi-Agent Architecture:** Integrated AI agent orchestration
- ✓ **Enterprise Features:** Calendar sync, email integration, file management
- ✓ **Gamification:** Achievement system and progress tracking

Technical Stack

- **Frontend:** React 18, TypeScript, Vite, Tailwind CSS
- **Backend:** Supabase (Database, Auth, Edge Functions, Storage)
- **UI Components:** Radix UI, shadcn/ui
- **State Management:** React Query, Context API
- **Voice:** Web Speech API, Speech Synthesis API
- **Deployment:** Vercel-ready static builds

Important Notes

- **Node Modules Excluded:** Run `pnpm install` to restore dependencies
- **Build Artifacts Excluded:** Use `pnpm run build` to create production builds
- **Environment Setup:** Configure Supabase credentials before running
- **Database Schema:** All migrations are included and ready to deploy

Support Files Included

- Configuration files (package.json, tsconfig.json, etc.)
- Complete component library with custom UI elements
- Database schemas and migration scripts
- Edge function implementations
- Test suites and quality assurance reports

Next Steps for Developer

1. Review the architecture documentation in `/docs`
2. Set up local Supabase instance
3. Configure environment variables
4. Run the application locally
5. Review edge functions and customize as needed
6. Deploy to production environment

File Size: 170MB

This comprehensive package includes everything needed to deploy and maintain the AI Secretary platform.
